Symphia Transportation Solutions: Security, Safety and Efficiency

Security solutions that protect mission-critical operations are paramount to the safety of the world's transportation systems. These intricate and interconnected environments demand innovative security technology solutions that keep individual citizens safe, prevent disruption and ensure the continuity of day-to-day activities that underpin economic and social stability.

Security personnel must have access to accurate, up-to-the-minute situational awareness that empowers them not only to react to events, but also utilize a multitude of data to proactively discern vulnerabilities and potential threats. This information is critical to determining and deploying an immediate and appropriate course of action.

The User

An interstate, multi-modal transportation agency responsible for the safe passage of millions of people and cargo each day.

An interstate agency in the United States is responsible for the operation of more than 15,000 square miles of a trade and transportation network that includes bustling airports, seaports, commuter ferry, rail and bus transit systems, as well as tunnels and bridges.

The Challenge

How to maximize uptime and efficiency across a sprawling and complex network while protecting people, property and business continuity.

The agency is charged with the safe passage of millions of people and cargo through these structures each day. It must determine how to best secure and protect these multifaceted and populous environments to ensure business continuity, deter criminal activity and anticipate and prevent threats.

The Solution

Symphia VMS with Centralized Monitoring, Investigation, Analytics and Alarm Management.

Partnering with Intellicene, the agency implemented Symphia VMS, which gave security personnel the ability to streamline video security operations. The powerful, fully integrated video management tool included automated monitoring and event responses, investigation management and interactive facility maps, making their video security a more manageable, reliable, and cost-effective solution.

The Outcome

Faster, more efficient investigations and response, increased ability to anticipate and prevent threats, deter criminal activity and ensure business continuity.

Symphia's advanced technology enables officials to view video footage anywhere and perform fast, insightful investigations. When an incident occurs, security staff can leverage powerful investigation management resources to analyze what happened, collect the information required to substantiate their findings, and record and safeguard their case files for evidentiary purposes.

Regardless of the size of any given transportation network, ensuring its safety is a crucial component of a nation or region's overall security posture. Officials must always be prepared to protect and secure these interconnected environments, including trade operations and the population at large.

The Symphia Advantage

Highly scalable VMS with powerful investigation tools and sophisticated, actionable intelligence.

Innovative video management technology provides officials with greater situational awareness and actionable insights that fuel a proactive security approach and provide essential resources for investigation management. Intellicene Situational Intelligence Solutions are built on an open and flexible architecture and designed to seamlessly integrate with other security technology and controls, allowing an organization to maximize its investments while optimizing performance.
